I. THE ORIGIN OF THE ANIMAL

The koala, also called the Australian sloth, is found in the coastal regions of eastern Australia. Koalas likely evolved on the Australian continent during the period when the country began its slow northward drift.

II. WHAT DOES THE KOALA EAT?

the only animal in the world to eat eucalyptus leaves, a plant toxic to other animals. Eucalyptus is the only thing koalas eat.

What does a eucalyptus leaf look like?

#III KOALA REPRODUCTION

KOALA MOTHERS USUALLY HAVE ONE BABY PER YEAR, AND ON RARE OCCASIONS, THEY GIVE BIRTH TO TWINS. THE BREEDING SEASON IS GENERALLY BETWEEN JULY AND SEPTEMBER.

IV. THE LIFE EXPECTANCY OF A KOALA

**THE LIFE EXPECTANCY OF A KOALA
IS 13-18 YEARS.**
